

Banking Transaction Management System (BTMS)

Banking Transaction Management System v1.0

Test Phase: User Acceptance Testing

Prepared by: Testing Team

Date:12/5/2026

Environment: QA

UAT Test Summary

Objective	Validate that the Banking Transaction Management System (BTMS) satisfies business requirements and allows users to perform secure and accurate banking transactions successfully.
Scope	• Transaction Processing • Balance Validation • Money Transfer • Account Balance Update • Transaction Failure Handling • Email Validation • Trigger-based Fee Calculation
Out of Scope	• Performance Testing • Security Testing • API Testing • Mobile Application Testing
Pre-requisites	• QA environment is available • Test database is configured • Valid customer and account records exist • Users have sufficient permissions • Initial account balances are predefined

UAT Test Cases Table

TC-ID	Test Scenario	Test Steps	Expected Result
UAT-01	Validate that user cannot make a transaction with insufficient balance	INSERT INTO Transactions (sender_account, receiver_account, category_id, transaction_type, amount, transaction_status, transaction_date) VALUES (1,2,4,'Transfer',100.00,'Failed',current_date()),	• Transaction is rejected successfully • Appropriate validation message is displayed • Account balance remains unchanged
UAT-02	Validate making a transaction (Happy Scenario)	Insert valid data to make a transaction	• Transaction completed successfully • Unique transaction ID is generated • Sender balance is deducted correctly • Receiver balance is updated correctly
UAT-03	Ensuring that a Failed transaction does not affect account balance	Make a Failed transaction Create a transaction with status "Failed"	• Failed transaction does not affect sender or receiver balances • Transaction status is stored as "Failed"
UAT-04	Validate making a transfer with amount over the daily limit	Make a transaction with valid data INSERT INTO Transactions (sender_account, receiver_account, category_id, transaction_type, amount, transaction_status, transaction_date) VALUES (1,2,4,'Transfer',50000.00,'Success',CURRENT_DATE());	• Transfer is blocked successfully • Warning message appears indicating daily transfer limit exceeded • Transaction is not completed

UAT-05	Validate that transaction fees are applied automatically via triggers	Perform a successful transfer transaction that requires transaction fees	• Transaction fee is deducted automatically • Fee amount is calculated correctly • Updated account balance reflects deducted fee
UAT-06	Email uniqueness enforced	Execute INSERT statement : INSERT INTO Customers (full_name, date_of_birth, email (using an existing email address), phone)	• Customer record is not created • Error message appears indicating duplicate email
UAT-07	Validate that account balance is updated automatically after transaction	Make a Successful transaction INSERT INTO Transactions (sender_account, receiver_account, category_id, transaction_type, amount, transaction_status, transaction_date) VALUES (1,2,4,'Transfer',100.00,'Success',current_date()),	• Account balance is updated automatically after Successful transaction • Sender balance decreases correctly • Receiver balance increases correctly
